

MOBILE SCREENING FLEET

Flexible controls along smuggling routes

Bring screening to the point of need

Move inspection capacity as routes and priorities change. Support customs and law enforcement beyond fixed checkpoints.

MBX, MXV-DV and MSS combine vehicle, cargo, people and baggage screening in one deployable fleet.

Mobile capacity to support smuggling interdiction

Vehicle screening along changing routes

Mobile backscatter inspection for customs and law enforcement.

300 kV

Backscatter X-ray source

Inspect vehicles and cargo for concealed materials and anomalies. Imaging helps operators identify areas that merit closer investigation.

Flexible deployment, focused follow-up

Place screening capacity where it is needed, reinforce temporary controls and relocate as operational priorities change. Use image findings to guide targeted physical inspection.

Complementary screening in one checkpoint

MXV-DV

100100DV X-ray

A 100 × 100 cm tunnel and two X-ray views support inspection of baggage, parcels and larger cargo, helping resolve overlapping objects.

MSS

People and small items

A high-end walk-through metal detector and a compact baggage X-ray scanner bring people and small-object screening to temporary checkpoints.

A checkpoint in minutes

Rapid setup brings the screening layers together. Remote connectivity supports operational oversight and coordination across the deployed fleet.
